

# Math-in-CTE Lesson Plan

Technical Mathematics: Math-in-CTE

<p><b>Lesson Title:</b> Animate Your Class Notes</p> <p><b>Writers:</b> John Barber &amp; Suzanne Haberkorn, Joliet Township HS–West</p> <p><b>Math Teachers:</b> Mr. Peterson, Edna Bazik, Kim O'Malley</p>	<p>Lesson #1 Vocabulary:</p> <ul style="list-style-type: none"> <li>shapes (square, circle, triangle, cube, sphere, cylinder)</li> <li>keys/frames</li> <li>tools</li> <li>axis</li> <li>degrees</li> <li>2D and 3D</li> <li>Hertz</li> <li>distance</li> <li>time</li> <li>cycles</li> </ul>
--	---

<b>Technical Area:</b> STEM & BMIS Academy
<b>CTE Concept(s):</b> 2D & 3D Animating
<b>Math Concept(s):</b> Frequency, Cycles, Time, Distance, Arc, Literal Equation
<p>CCSS Math Practices &amp; Standards:</p> <p><b>CCSS.9-12.N.CN.1</b> (Perform arithmetic operations with complex numbers)</p> <p><b>CCSS.9-12.A.REI.4</b> (Solve equations and inequalities in one variable)</p> <p>Workplace, CCSS ELA, and/or NGSS Standards:</p>

Lesson Objective:	Take notes in a core class of student’s choice and brings them to the Computer Animation lab. Class notes are animated using <b>3DSMax or Adobe Flash.</b>
Supplies Needed:	<p>Computer with internet access</p> <p>3DS Max software or Adobe Flash software</p> <p>Core classroom notes</p>

THE "7 ELEMENTS"	TEACHER NOTES (Answer Key)
<p><b>1. Introduce the CTE lesson.</b></p> <p>QUESTION: Did you ever think that you would actually take notes and use them?</p> <p>Have you ever thought about having your core class notes come to life?</p>	<ol style="list-style-type: none"> <li>1. Show students a finished project example.</li> <li>2. Review the rubric guidelines.</li> <li>3. Introduce the <b>Windows Movie Maker</b> tool that students will use to create their animation and video.</li> <li>4. Demonstrate the sound recording software students use to narrate/voiceover their project.</li> <li>5. Students begin working on their animation.</li> </ol>
<p><b>2. Assess students' math awareness as it relates to the CTE lesson.</b></p> <ol style="list-style-type: none"> <li>a. Define two dimensional (2D) and give an example.</li> <li>b. Define three dimensional (3D) and give an example.</li> <li>c. What is one drawing followed by another in a slightly different pose called?</li> <li>d. What is the difference between 2D and 3D Animation?</li> <li>e. Are flipbooks 2D or 3D?</li> <li>f. Is stop motion 2D or 3D?</li> </ol> <p><b>3. Work through the math example embedded in the CTE lesson.</b></p> <p>Calculate the frequency of a pendulum spinning 3 times in 7 seconds. Teacher and students will have open discussion about solving frequency and how it relates to cycles and time.</p>	<ol style="list-style-type: none"> <li>a. 2D is a flat surface with no depth. Examples: squares, circles, triangles.</li> <li>b. 3D is an object that has depth. Examples: A cube, cylinder, sphere.</li> <li>c. ANSWER: Animation</li> <li>d. The difference between 2D and 3D animations is: 2D animations follow the previous image with a slightly different movement, whereas 3D animations look more realistic.</li> <li>e. 2D</li> <li>f. 3D</li> </ol> <p>3 full cycles / 7 seconds = <b>0.429 Hz</b></p> <p>HINT: Frequency = Cycles/Time</p>

<p><b>4. Work through <i>related, contextual</i> Math-in-CTE examples.</b></p> <p>If the initial angle is 45 degrees, how many degrees does it take to get to 170 degrees?</p> <p>What is the initial angle of a stable equilibrium?</p> <p><b>5. Work through the traditional math examples.</b></p> <p>How many degrees make up a complete circle?</p> <p>What is half of that circle?</p> <p>When would you need to know degrees?</p> <p><b>6. Students demonstrate their understanding.</b></p> <p>Students present their designs to the class. Audience provides feedback for each presenter.</p> <p><b>7. Formal assessment.</b></p> <p><b>Source of Formal Assessment Items:</b> Sample release and retired items from ACT, ACT COMPASS, SAT,) ACT WorkKeys, Illustrative Mathematics, NAEP, PARCC), Trends in International Mathematics and Science Study (TIMSS), and teacher-constructed test items.</p>	<p><a href="http://screencast.com/t/XaAiUuHcTKoN">http://screencast.com/t/XaAiUuHcTKoN</a></p> <p>170 – 45 = 125 degrees</p> <p>0 degrees</p> <p>360 degrees</p> <p>180 degrees</p> <p>Compass &amp; protractor measurements</p> <p>Share performance assessment projects. <b>Students create a pendulum in 2D and 3D and then animate it.</b> This will be produced from their notes taken in physics class.</p> <p>Select sample release and retired test items to include with an animation-specific assessment.</p>
